

Left Side of Sleigh

Now we can start to see the sleigh taking shape. This part is decorated with real gold plating! It has 8 multi-colour LEDs as well so it ought to be quite pretty when it works. To fit it, you will have to remove the two screws from the left motor, then apply the side piece, making sure that the large hole passes around the protrusion on the motor around the axle. Then do up the screws again as before, not forgetting the 3mm spacer.
